

FOR IMMEDIATE RELEASE

Larger Linear Gate Operators Now Include Enhanced APeX Controllers

Carlsbad, Calif. (June 16, 2011) – [Linear LLC](#), the leading supplier of electronic products for a host of residential and commercial applications, announces that its industry-leading APeX™ Controller is now included in its large barrier gate and industrial swing and slide gate operators.

Linear's APeX controller technology now offers installers the familiar, easy-to-use features in the following operators: [BGU](#), [BGU-D](#), [BGUS](#) and [BGUS-D](#), and [SG](#) parking and vehicle control barrier gates; [HSLG](#), [GSLG-A](#), [VS-GSLG](#) commercial and industrial slide gates; [SWG](#) and [VS-GSWG](#) commercial and industrial swing gates.

Since the introduction in 2008 of the APeX Controller, Linear's gate operators have become known for reliability, flexibility, and simplicity. The APeX Controller allows for smoother integration between the gate operator and access control system, and was designed for easy setup and programming -- with built-in firmware that works with all gate types with no dipswitches or potentiometers to adjust.

"The APeX Controller has been extremely well-received by our channel partners and professional installers for its many convenient features, including plug-and-play loop detector sockets and built-in surge protection," notes Larry Foisie, VP of Entry Systems.

Earlier this year, Linear added new features and programming enhancements to the Controller, including:

- Selectable Safe Anti-Tailgate Feature
- Automatic Close Command if Gate is Off Limit (with Countdown)
- Increased Flexibility with Run Alarm and Pre-Start Alarm
- Expanded Radio Reception Range
- New Auxiliary Relay Delay Functions
- Enhanced Display of Transmitter IDs and Cycle Counter
- Constant Pressure to Operate Feature
- Selectable Shadow Loop Prevents Opening of Gate

For more information about Linear's line of gate operators, please contact Linear at (800) 421-1587, or visit www.linearcorp.com.
