PD300Z-2 PLUG-IN LAMP MODULE

The GoControl™ family of Z-Wave® certified wireless lighting products (smart LED fixtures, bulbs, switches, dimmers, outlets, plug-in modules, and thermostats) and security devices (alert sounder, motion sensor, and door/window sensor) bring a new level of intelligent wireless capability to commercial and residential environments.

The Z-Wave wireless protocol is an international wireless standard for remote home automation, security and other applications. This product can be included and operated in any Z-Wave network with other Z-Wave certified devices from other manufacturers and/or other applications. All non-battery operated nodes within the network will act as repeaters regardless of vendor to increase reliability of the network.

GoControl Z-Wave products are easy to install, are Z-Wave certified, and allow dealers to create an integrated wireless network with nearly limitless expansion and interoperability with security, energy management, home entertainment, appliances, and more.

This product supports 40Kbps data transmission. This product can also be used for network support in systems that stream metadata. An example might include transmission of information from audio devices such as song title, artist, and album information to various displays around the home. An example might include transmission of information from audio devices such as song title, artist, and album information to various displays around the home. As part of a Z-Wave network, the PD300Z-2 will act as a wireless repeater to insure that commands intended for another device in the network are received. This is useful when the device would otherwise be out of the radio range of the wireless controller.

For indoor use only. Retain instructions for future use.

INSTALLATION

Plug this Lamp Module into the wall outlet near the lamp to be controlled, and plug the lamp into the Lamp Module. Make sure the lamp(s) to be controlled total no more than 300 watts.

To reduce the risk of electric shock, this product has a grounded type plug that has a third (grounding) pin. This plug will only fit into a grounding type power outlet. If the plug does not fit into the outlet, contact a qualified electrician to install the proper outlet. Do not change the plug in any way.

WARNING: Plugging a non-resistive load such as fluorescent lighting or a device with a motor may result in damage to the Lamp Module and will void the warranty.

✓ NOTE: The grounded outlet on the right side of the module is always powered and can be used for any other appliance.

Adding to a network:

See the Wireless Controller operating instructions for details to include this module under the command of the Wireless Controller.

1. Prepare the Controller to include a unit to the network, by adding it to a group (method of adding a node to the network). Refer to the Controller instructions.
2. The PD300Z-2 must be in its permanently installed location.
   1. For NWI Inclusion, press the button on the PD300Z-2 once.
   2. For classic inclusion, press the button on the PD300Z-2 twice.
3. You should see an indication on your Controller that the "DEVICE WAS INCLUDED" in the network.
   ✓ NOTE: If you have trouble adding the PD300Z-2 to a group it may be that the Home ID and Node ID were not cleared from it after testing. You must first "RESET UNIT" with your controller to remove it from the network. Although adding it to a group includes it in the network, removing it from a group does not remove it from the network. If removed from a group, it functions only as a repeater.

Removing from a network:

The PD300Z-2 can be removed from the network by the Controller/Gateway. Refer to the Controller operating instructions for details.

1. Set the Controller into Removal Mode and follow its instruction to delete the PD300Z-2 from the Controller.
2. Remove the switch by press the button twice.
3. You should see an indication on your Controller that the “device was removed” from the network.
BASIC OPERATION

Button (Local Control)
The button on the PD300Z-2 allows the user to turn ON, OFF, or DIM and BRIGHTEN the load attached to the controlled outlet.
- Tapping button toggles the load attached ON or OFF.
- Pressing and holding the button will dim or brighten the load attached.
- Include or exclude the module from the Z-Wave system. When a Controller prompts to “Send Node ID” or to “Press Button on Unit”, quickly tap the button once to satisfy those instructions. (Tapping the button also toggles the load attached ON or OFF.)

Remote Control
The PD300Z-2 will respond to Basic, Multilevel, and Scene Activation commands that are part of the Z-Wave system. Refer to your Controller’s instructions as to whether your Controller can transmit those commands.

Operation Note
When a light bulb reaches the end of its life and burns out, it sometimes creates a momentary short circuit. The high current that results may cause the dimmer to respond by turning off. Should this happen, replace the bulb with a new one. The dimmer can now be operated to restore power to the light.

ADVANCED OPERATION

Protection
The PD300Z-2 supports the Protection Command. The module can be set to any one of three Protection modes by a Z-Wave Controller. Refer to your Controller for information on how to set the various modes of Protection. Some Controllers may only be able to set certain settings of Protection. Regardless of the Protection setting, the module will operate normally when using the Controller.
- When Protection is set to No Protection, the unit works normally, the module will turn on and off with the button on the unit.
- When Protection is set to Child Protection, press the button on the module three times rapidly to control the attached load.
- When Protection is set to Button Disable, the button will not work to turn the attached load on or off. The button can still be used to access the Z-Wave network.

All On/All Off
The PD300Z-2 supports the ALL ON / ALL OFF commands. The module can be set to respond to ALL ON and ALL OFF commands four different ways. Refer to your Controller for information on how to set the module to operate in the manner you desire. Some Controllers may be only able to set certain settings of ALL ON / ALL OFF response. The four different ways the module can be setup are:
- Module responds to ALL ON and the ALL OFF command.
- Module responds to ALL OFF command but will not to ALL ON command.
- Module responds to ALL ON command but will not to ALL OFF command.
- Module does not respond to ALL ON or ALL OFF command.

Manufacturer Specific
The PD300Z-2 supports the Manufacturer Specific command. The module can be set to respond to the Z-Wave network. Refer to your Controller’s instructions on how to get this information from the module.

SPECIFICATIONS

- Power: 120 VAC, 60 Hz
- Signal (Frequency): 908.42 MHz
- Maximum Load: 300 W, for incandescent lamps only.

NOTE: A minimum of 20 watt load is recommended for the “Load Sense” feature and dimming capabilities of this product to operate properly.

- Range: Up to 100 feet line of sight between the Controller and or closest Z-Wave Receiver module.
- Z-Wave® and Z-Wave Plus® are registered trademarks of Sigma Designs and its subsidiaries in the United States and other countries.

REGULATORY INFORMATION

The PD300Z-2 is certified to comply with applicable FCC and IC rules and regulations governing RF and EMI emissions.
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

FCC Notice
This device has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
- Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment

IC Notice
This Class B digital apparatus complies with Canadian ICES-003. This apparatus is compliant with the requirements of the Canadian Interference-Causing Equipment Regulations.

WARRANTY

What is Covered?
Nortek Security & Control (“NS&C”) warrants to consumers who purchase this product for personal, family or household purposes new from NS&C directly or from an authorized NS&C dealer, that the product will be free from defects in materials and workmanship for a period of 1 year from the date of purchase. This warranty only applies if the product is installed at a residence in the 50 United States or District of Columbia, and only at the site of the original installation. This warranty is not transferable. If a defect exists, NS&C will have the right to repair or replace the product. This warranty does not cover defects or damages caused by improper handling, maintenance, storage, installation, removal or re-installation, misuse, non-factory authorized modification or alteration, use of incompatible accessories, electrical power problems or surges, impact by foreign objects, accident, fire, acts of God, normal wear and tear or shipping damage other than a shipment from NS&C. Note that all NS&C products are designed to be installed, removed and serviced by trained individuals or professionals. Keep your original sales receipt as it will be required to obtain warranty service. This warranty shall not be extended or reinstated upon receipt of any repaired or replacement part or product under this warranty. No person is authorized to extend or otherwise modify this warranty.

How do I Obtain Warranty Service?
To obtain warranty service, email our Returns Department at returns@nortek.com. Include your name, address, telephone number, the model number of your product, a copy of your original sales receipt, and a description of the problem. Unless we need to discuss the situation further with you, you will be emailed a Return Authorization Number and shipping instructions. If we need to discuss the situation further with you, we will call or email you. NS&C may require troubleshooting on installed product before a Return Authorization Number is issued. Anything shipped to us without a Return Authorization Number will be automatically returned unopened. You are responsible for the charges for shipment to us, unless you are a California resident.

Limitations
THE DURATION OF ANY IMPLIED WARRANTY, INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, SHALL NOT EXCEED THE WARRANTY PERIOD PROVIDED HEREIN. Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.
NS&C SHALL NOT BE LIABLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM THE BREACH OF ANY WRITTEN OR IMPLIED WARRANTY. Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

This warranty gives you specific legal rights, and you may also have other legal rights which vary from State to State.

Radio controls provide a reliable communications link and fill an important need in portable wireless signaling. However, there are some limitations which must be observed:
- For U.S. installations only: The radios are required to comply with FCC Rules and Regulations as Part 15 devices.
- As such, they have limited transmitter power and therefore limited range.
- A receiver cannot respond to more than one transmitted signal at a time and may be blocked by radio signals that occur on or near their operating frequencies, regardless of code settings.
- Changes or modifications to the device may void FCC compliance.
- Infrequently used radio links should be tested regularly to protect against unintended interference or fault.
- A general knowledge of radio and its vagaries should be gained prior to acting as a wholesale distributor or dealer, and these facts should be communicated to the ultimate users.
