

## V222 HOSE COMPATIBILITY

The Model V222 is a 30-foot long, 1-3/8 inch diameter crush-proof central vacuum hose. This hose is sold separately and is also included in the Model VMGAR Deluxe Garage/Car Tool Kit. This hose is now being supplied with newly designed attachment and inlet ends.

The improved vacuum port inlet cuff is designed to fit the utility inlet port on Linear's AVP and AVR Series AirVac Central Vacuum Power Unit's. The hose is also compatible with the utility inlet port on all legacy AirVac power units. This hose is intended for garage use where the hose connects directly to the central vacuum power unit. **The inlet cuff may not be compatible with some Hayden retrofit wall inlet valves.**

The attachment end of the hose swivels and provides a friction fit to the tool or wand being used. The spring-loaded locking button has been removed from the attachment end for a better fit with the Model VMTEP Plastic Telescopic Central Vacuum Wand and the other accessories in the VMGAR kit.

Because of the hose's new friction fit attachment end, the V222 hose **is not** recommended for use with the Model VMTE Metal Telescopic Central Vacuum Wand. This wand is sold separately and supplied with the Model VMTKD Deluxe Tool Kit. It **is** recommended to use the alternate Model V400S Central Vacuum Hose when using the VMTE wand.

The Model V400S hose should also be used if the hose will be used with Hayden wall inlet valves.
