

CENTRAL VACUUM FILTER BAGS

The Model 226117 Filter Bag used in the Red and Platinum series Central Vacuum Power Units, and for replacement in older models, will phase out the use of DuPont's[®] Teflon[®] brand PTFE (polytetrafluoroethylene) coating.

The new filter bag will feature a PTFE coating providing equivalent performance to the previous filter bag.

This is a running change, both types of filter bags will appear in stock until the old stock is depleted.

On the AVP and AVR central vacuum power units, the DuPont[®] Teflon[®] brand logo will be removed from the power unit's control panel and packaging. These are graphics changes only, the performance of the system will remain the same.

Model 226117 Filter Bag

All these brands are now under one name, Linear.
