

Linear Announces New Wall Station for Garage Door Operators

Effective immediately, Linear is shipping an updated Garage Door Operator Wall Station control (Part # HAE00001) with several feature enhancements recommended by our loyal dealers and distributors (see Image A).

Linear Garage Door Operator models that feature the new wall station are: LDO33, LDO50, LSO50, LCO75, and LDCO800.

The new Wall Station includes the following updates:

- More robust circuit board screw terminals / wiring connection points
- Red color on vacation switch indicates that the switch is set to vacation mode
- New coin / tool slot and smoother finish on vacation mode button (the ribbed surface has been removed)
- Linear logo on front of wall station
- Improved feel to buttons; improved unit color

For a short time, Linear Garage Door Operators that include the new wall station will be marked with a green dot on the individual operator carton, to help our customers identify which model wall station is inside the sealed carton. Full pallets of operators containing the new wall station will also be marked with a green dot.

The location of the green dot can be found near the Date of Manufacture code on the garage door operator carton (see Image B). The location of the green dot on full pallets of Garage Door Openers is adjacent to the white bar code label at the top of the pallet (see Image C).
