The New Linear VMC1 Video Security Intercom System Safeguards What Matters Most

With live video, whole-home intercom, trigger mechanisms and remote monitoring, homeowners now have a single system for centralized security at home or away.

Carlsbad, CA – June 2012 – [Linear LLC](#), the leader in residential and commercial access control, emergency response and security solutions, announces the new Linear® [VMC1 Video Security Intercom System](#), a centralized security solution that delivers live video, audio, whole-home intercom, door releases, alarm triggers, and remote monitoring features in one highly-capable and flexible system.

The VMC1 Master Station is the central hub of the system and has a 5.6" color video screen that can monitor any door equipped with a camera. Traditional security systems with multiple camera stations can be difficult to monitor since the homeowner isn't always available or in front of a screen when someone rings the doorbell. With integrated live video support, the VMC1 System provides access to up to three color video cameras or video door stations, allowing users to view activities inside and out from the master station, or with optional accessories, from a TV display, or select portable devices. When not at home, the VMC1 System can also deliver a live video signal or email a snapshot picture of the front door visitor to a smart phone or computer via the internet for quick identification.

In addition, from the VMC1 Master Station, music can be shared with any room station, either from the AM/FM tuner or from auxiliary devices such as MP3 players or smart phones. While all room stations allow room-to-room or whole-home communication, the Master Station video screen allows users to speak with and see visitors at monitored doors. The system can support up to three remote electronic door release mechanisms to unlock a door or gate and has two control output switches to turn on lights, trigger an alert on an alarm panel or even activate thermostat controls. By combining visual monitoring with the ability to enact a security response

in the home, the VMC1 is a serious deterrent and one of the most sophisticated video security intercom systems available.

With all the security and control functionality, one might overlook the whole-home intercom functionality of the Linear VMC1. Seeking to address a range of communication needs, the intercom enables users to speak to a single room, a group of rooms or the whole house (up to 20 rooms). Whether you're telling the kids to get ready for bed, calling houseguests for dinner or using the system to make a company-wide announcement in a small office, the VMC1 initiates hands-free conversations to any room station. One or more rooms can also be monitored or kept private, depending on preferences.

The new VMC1 Video Security Intercom System comes in handsome white, black or bronze finishes to complement any décor.
