

International Electronics, Inc. News Release

FOR IMMEDIATE RELEASE

eMerge Browser Managed Security Platform Extended with the Introduction of the eMerge 50 and eMerge 440 at ASIS International 2005

***No PC Server to Buy, Install, or Maintain; Integrated Management of Access
Control and Video Monitoring; System-Wide Threat Level Management***

CANTON, MA, September 13, 2005 – International Electronics, Inc., (IEI) (OTC:IEIB.OB) demonstrated its eMerge 50 and eMerge 440 Browser Managed Security Platforms at the 2005 ASIS International Annual Seminar and Exhibits (booth 135), a security industry trade show in Orlando, Florida. The eMerge 50 and 440, along with the full featured eMerge 5000, are integrated security management systems with an easy-to-use web browser interface, Linux operating system, MySQL database and web server all embedded within the product, which make them easy to use, easy to install, and easy to maintain and upgrade.

The eMerge 50 brings the benefits of a network architecture to basic access control applications. The expanded eMerge 440 handles a broad range of security functions such as real time monitoring, elevator control, video monitoring and photo ID in an integrated package.

“With its embedded software, a unique attribute of our eMerge Browser Managed Security Platform”, said John Waldstein, CEO of International Electronics, “eMerge is both easier to use and more powerful than other systems. It’s a network appliance that has both the operating system and the application software embedded in the system controller. With its ability to monitor and control multiple facilities from a web browser anywhere in the world, eMerge changes the way security managers and dealers will manage, support and control their physical assets. We are very excited about the response to the eMerge product line.”

Major advantages of the eMerge platform include:

- A user interface securely accessed with a standard web browser under password control;
- Proven Red Hat Linux operating system embedded in the Intel processor, ensuring a stable platform;
- Integrated management of access control and video monitoring from anywhere the Internet is available;
- Immediate system-wide changes implemented through Threat Level management;

- Communications over existing networks or the Internet using easy to obtain, inexpensive equipment commonly found in most offices;
- Authenticated and encrypted information flow to protect system operation even over public network segments;
- Alerts delivered via email and even cell phones;
- Intuitive dynamic floorplans for easy monitoring and control over complex facilities;
- Remote update of software to every level of the system, keeping all components up-to-date.

About International Electronics, Inc.

International Electronics, Inc. (IEI), an ISO9001:2000 certified manufacturer, designs, manufactures, markets and sells electronic access control equipment and browser-managed security platforms used in residential and commercial security systems and wireless access control and fleet management systems for industrial mobile asset applications. IEI's products include its Door-Gard™ and Secured Series™ access control lines, its LS line of integrated battery operated door locks, its eMerge™ browser-managed access and security management products and its line of PowerKey™ industrial access control and fleet management products. IEI markets these products to the leading distribution and installation companies serving the electronic security industry and PowerKey™ products direct to end user companies along with those companies servicing the material handling equipment industry in the United States as well as in Eastern and Western Europe, Asia, Canada, South America, Australia and New Zealand.
