International Electronics, Inc. Introduces the prox.pad™ *plus* IR
Wireless Infra-Red (IR) Communication Enabled PC-Based Access System

Integrated Control, Proximity Reader and Keypad for Entry-Level to Mid-Size Applications

CANTON, MA. July 12, 2007 – International Electronics, Inc. (IEI), a leading manufacturer of electronic access control solutions, has introduced the prox.pad™ *plus* IR PC-based access system that is wireless Infra-Red communication enabled, the newest offering in the prox.pad product family.

The prox.pad *plus* IR uses Infra-Red (IR) technology to communicate with IEI's hand-held Data Transfer Device (DTD). Data communication using the hand-held DTD eliminates the need for costly wire runs and allows for access control where it may have not been possible before. Data from the DTD can be loaded onto a PC with IEI's Hub Manager Professional software for easy access control management and reports.

"The prox.pad *plus* IR adds depth to IEI's IR enabled access system products," said Jim Lynch, IEI's Director of Product Management. "Like the LS2 Series Access Control Locksets, the prox.pad *plus* IR gives our dealers a choice in providing comprehensive access control solutions where traditional wired access systems are just not an option."

The prox.pad plus IR provides entry-level to mid-sized access control functionality with the use of its two onboard relays and two inputs for request to exit and door position monitoring. By using the proximity reader and keypad together, a higher level of security is achieved by requiring both to grant access. The prox.pad plus IR can be directly mounted to a single gang electrical box or to most flat surfaces. Enhanced system functionality is achieved when managed with IEI's Hub Manager Professional software. The software provides the management of people and doors through fast and easy report creation and step-by-step set-up wizards.

The prox.pad *plus* IR is available immediately through most security and locking hardware distributors. Call IEI for standard pricing and configuration options.

About International Electronics, Inc.
International Electronics, Inc. (IEI), an ISO9001:2000 certified manufacturer, designs, manufactures, markets and sells electronic access control equipment and browser-managed security platforms used in residential and commercial security systems and

wireless access control and fleet management systems for industrial mobile asset applications. IEI's products include its Door-Gard™ and Secured Series™ access control lines, its LS line of integrated battery operated door locks, its eMerge™ browser-managed access and security management products and its line of PowerKey™ industrial access control and fleet management products. IEI markets its security management and access control products to leading distribution and electronic security installation companies, and its PowerKey™ products directly to material handling equipment users worldwide.
