The H460 CAT-5 Music Distribution System delivers quality audio to as many as four rooms via a single CAT-5 connection to each location. The H460 comes with a wall plate and a hub. The wall plate delivers audio to the hub which distributes audio to each location. Each location has its own local amplifier which is powered by the H460 Hub. The system can be expanded with an additional hub for up to 8 rooms.

**Typical Installation**

1. **Input wall plate**
   - To expand the system to eight rooms, connect the output of the first hub to the input of the second using a CAT-5 patch cord such as the H691 or H692. Use only one input wall plate and connect to first hub as shown.

2. **Connection to amplifier**
   - To wire to a location that has only a single speaker, tie the Orange and Green lines together from the H460 and connect to the left input of the amplifier. Then connect the speaker to the Left- and Left+ lines of the amplifier as shown.

3. **Expansion & Using Other Amps**
   - **ChannelPlus model H460**
     - The H460 system is compatible with Russound A-VC and A-KP volume controls. With these models, systems features such as IR control of the remote source and external amplified speakers can be added. Visit www.openhousesystems.com for more information about installation and operation of these models.
