LS1 Installation Instructions

A. Affix paper template to door and follow template instructions for preparing door.

Note: See template for measurements.

1. Locks are factory assembled with a split spacer ring for 1-3/4" door thickness, (when lock chassis is firmly against ring.)

2. Locks can be adjusted for 1-5/8" to 1-7/8" door thickness. Before installation, use door thickness gauge on template (as shown), to check lock chassis position. Center of latch retractor should align with mark on gauge for appropriate door thickness.

3. If chassis is not on center, screw chassis in or out to align with mark. If adjusting for doors thinner than 1-3/4" thickness, split spacer must be removed. Check that lever engages lever catch before installation.

4. Make sure to adjust for correct door thickness.

1. To adjust lockset for desired door thickness, turn lock chassis in the direction to adjust for narrow or thick doors. (For narrow doors, remove split spacer ring.) It may be necessary to depress the lever catch on spindle in order to rotate the chassis and spindle.

2. Using a standard screwdriver depress lever catch to clear spindle support collar while turning lock chassis. Turn spindle to adjust for correct door thickness.

3. Once lock is adjusted for door thickness, install exterior lever and check that lever engages lever catch before completing lock installation. Lever should snap securely into place with no play. If lever wobbles or does not engage with catch, turn spindle until lever snaps into place.

4. Complete lockset installation.
Pass the wires and connectors through the 3/4" hole, then mount the exterior housing through door preparation. Make sure that the lock chassis and latch are properly engaged as shown (See Fig. 3B).

1. Remove screw from Battery Cover to access backplate.
2. Feed the wires and connectors through the backplate and raceway nut. Install lock washer on the raceway nut.
3. While holding the interior backplate in position, loosely install the two thru-bolts.
4. Tighten the raceway nut on the raceway tube that passes through the door using a crescent or 7/8" socket wrench. When this connection is tight, secure the thru-bolts.
5. Install two screws to the backplate to the door (wooden door application). The two predrilled holes on the backplate are located below the raceway nut.
1. Slide the inside lower housing over the lever tube until it has passed over the lever catch. Make sure the four remaining wires (if not used) are properly placed so they are not pinched by the lower housing.

2. Fasten with two brass #8 screws. Once secure, fasten the finished #8 screw at the bottom.

**Note:** It is recommended to use only alkaline batteries, due to predetermined power settings in the lock.

**Note:** All wire pairs are color coded to connect with like colored pairs.

1. Insert 4 AA batteries into battery holder. (Note polarity.)
2. Connect the gray/red wires from the raceway to the gray/red wires from the lever tube.
3. Connect the red/black wires from the raceway to the red/black wires from the battery pack. The four remaining wires are only for the optional door position switch, as well as the request to exit (REX) function. (See the programming manual for details.)
4. Place the battery holder over the center grooved stud.

**Note:** The fork, located on the bottom of the battery holder will clear the lower inside housing.

5. When properly aligned, push down on the battery holder assembly, engaging the upper part of the hole into the groove of the center stud. This will connect the lower fork with the center post, giving a very secure fit.

**Note:** It is recommended to use only alkaline batteries, due to predetermined power settings in the lock.

**Note:** All wire pairs are color coded to connect with like colored pairs.

1. Insert 4 AA batteries into battery holder. (Note polarity.)
2. Connect the gray/red wires from the raceway to the gray/red wires from the lever tube.
3. Connect the red/black wires from the raceway to the red/black wires from the battery pack. The four remaining wires are only for the optional door position switch, as well as the request to exit (REX) function. (See the programming manual for details.)
4. Place the battery holder over the center grooved stud.

**Note:** The fork, located on the bottom of the battery holder will clear the lower inside housing.

5. When properly aligned, push down on the battery holder assembly, engaging the upper part of the hole into the groove of the center stud. This will connect the lower fork with the center post, giving a very secure fit.
Installing The Levers

Inside Lever

1. See previous page

Conventional Cylinder (Figure 8A)

Outside Lever

1. Tailpiece must be in a vertical position in cylinder.
2. Insert cylinder in lever.
3. Press cylinder retainer into lever until flush with base of lever.
4. Align lever catch to face latch front (Fig. 8A).
5. Turn key in cylinder 45° in either direction.
6. Slide lever on tube until it stops at the lever catch.
7. Slightly wiggle and push until lever engages lever catch and connector.

IC Core Cylinder (Figure 8B)

Installing IC Core

1. Push lever on door in horizontal position until secure.
2. Insert control key (marked with a “C”) into IC core and turn clockwise.
3. Insert tailpiece (see chart below) into core. (Fig. 8B)
4. With control key in core, insert core fully into lock.
5. Turn control key 15° to lock cylinder in place.
6. Remove control key.

Removal of Levers

Inside Lever

1. Insert lever removal tool in slot. (Fig. 9A)
2. Depress lever catch and pull lever to remove.

Limited Warranty

This Nortek Security & Control product is warranted against defects in material and workmanship for twenty four (24) months. This warranty extends only to wholesale customers who buy direct from Nortek Security & Control or through Nortek Security & Control’s normal distribution channels. Nortek Security & Control does not warrant this product to consumers. Consumers should inquire from their selling dealer as to the nature of the dealer’s warranty, if any. There are no obligations or liabilities on the part of Nortek Security & Control LLC for consequential damages arising out of or in connection with use or performance of this product or other indirect damages with respect to loss of property, revenue, or profit, or cost of removal, installation, or reinstallation. All implied warranties, including implied warranties for merchantability and implied warranties for fitness, are valid only until the warranty expires. This Nortek Security & Control LLC Warranty is in lieu of all other warranties express or implied. All products returned for warranty service require a Return Authorization Number (RA#). Contact Returns at 1-855-546-3351 for an RA# and other important details.
