

Product Bulletin

To: eMerge 50 & 5000 v3 and “P” Series Customers

From: Integrated Systems Product Team

Subject: eMerge V3 systems or older versions of the controller (V2/V1) are “End of Life”.

July 2016 Nortek Security & Control started shipping the V4 version of eMerge “P” Series product for all 50P and 5000P controllers, expansion nodes - **EXN’s and Micro nodes** models. When the V4 version was introduced the add-on expansion modules (EXN / Micronode) would not be able to operate in a legacy system.

Customers looking to expand a V3 system or older version of the controller (V2/V1) will need to upgrade to the controller to V4. This upgrade requires customers to replace the main controller.

Note: V4 Controllers are compatible with v2, v3 and v4 50/ 50P and 5000 /5000P models. The feature set from V4 may not be identical from V3 features.

Today 50P V4 and 5000P V4 controllers support the new EXN V4 and Micronode V4 as well as legacy hardware. Because of this, V3 parts are “End of Life” as we no longer have inventory of these parts.

The following part numbers are EOL effective immediately - Aug 10st 2017:

Model	Part No	Description
eMergeEXN V3	620-101354	eMerge Expansion Node, v3
eMergeNNB V3	620-101355	eMerge Spare Network Node Board, v3
eMergeMNODE V3	620-101357	eMerge Micronode, v3

Replacement Part Cross-Reference Table:

Model	Part No	Description
eMerge50PTOK	620-100385	eMerge 50P V4 Take Over Kit
eMerge5000PTOK	620-100387	eMerge 5000P V4 Take Over Kit

If you have any questions please forward them along to Steve.Citron@nortekcontrol.com or John.LaFond@nortekcontrol.com as we would be glad to see how we can help.
