FOR IMMEDIATE RELEASE

International Electronics Introduces Biometric Fingerprint Access Control Solution

BioRead™ 1000 Eliminates Cards, PIN's or Keys

CANTON, MA, June 6, 2005 – International Electronics, Inc., (IEI) (NASDAQ: IEIBC), a leading manufacturer of electronic access control and asset management products for industrial and commercial applications, today announced availability of the BioRead 1000 Fingerprint Access System, a finger-only biometric solution specifically designed for small stand-alone applications.

The BioRead 1000 is suited for access control solutions requiring a higher level of security than provided by cards or PINS. Biometric authentication verifies individuals through a unique physical characteristic rather than the credential they carry or the PIN they enter at a keypad. The BioRead 1000 prevents unauthorized individuals from gaining access to a higher security area by using someone else's credential or PIN.

"The BioRead 1000 is a very attractive solution for specific environments," said John Waldstein, CEO of International Electronics. "By broadening our product line with a dependable and simple to use biometric solution, IEI is able to provide users with a full range of access control solutions, from single stand-alone doors to networked installations encompassing hundreds of doors. Like all our access control products, the BioRead 1000 is supported with a technical support staff and a minimum 2-year product warranty."

The BioRead 1000 stores fingerprint templates of up to 90 users. A hand-held programmer is used to initiate enrollment and other programming functions. It can be installed to send a Wiegand signal for each successful fingerprint authentication, allowing connection to an IEI Secured Series HubMax™ II, or MiniMax™ II controller for networked environments.

-more-

Key Features of the BioRead 1000 include:

- Finger only – no card required
- No PC or software needed
- Separate door controller for increased security in stand alone applications
- 90 templates
- Add/delete users with a hand-held programmer
- Authenticate in less than 2 seconds
- Option for Wiegand output

The BioRead 1000 Fingerprint Access System is available immediately from most security distributors.

About International Electronics, Inc.

International Electronics, Inc. (IEI), an ISO9001:2000 certified manufacturer, designs, manufactures, markets and sells electronic access control equipment and browser-managed security platforms used in residential and commercial security systems and wireless access control and fleet management systems for industrial mobile asset applications. IEI's products include its Door-Gard™ and Secured Series™ access control lines, its LS line of integrated battery operated door locks, its eMerge™ browser-managed access and security management products and its line of PowerKey™ industrial access control and fleet management products. IEI markets its security management and access control products to leading distribution and electronic security installation companies, and its PowerKey™ products directly to material handling equipment users worldwide.
