

NORTEK CONTROL PRODUCT BULLETIN

Linear® LDCO800 to LDCO801 transition

Starting Feb 1, Nortek Control will be discontinuing the Linear® LDCO800 and replacing with the model LDCO801.

AFFECTED SKU		Description	Reference (customer marketing name)	New UPC barcode number
OLD	NEW			
LDCO800	LDCO801	Garage Door Operator, 800N, Megacode, DC Operator		0 93863 14914 6

The only difference in appearance will be the new Nortek Control and Linear Logos on the box art, the manuals, and other printed materials in the product. All affected models also get new UPC barcode numbers. Later in the year, we will be phasing in the new Linear logo and any other art on the plastics on the product itself.

Functionally, all models will be identical to the most recently released models, including the latest firmware updates that remove the “beam off” feature launched in Dec 2020.

All backlog and new orders will be automatically switched over to the new models as the 800 and current models are exhausted and new products are available.

Please contact your RSM or customer service if you have any questions.
