NORTEK CONTROL PRODUCT BULLETIN

Linear PDS801 Residential Garage Door Operator Radio and Transmitter Improvements

Linear has made a number of notable improvements to our Garage Door Operator's radio features and will be making changes to our transmitter line.

- We have significantly improved the RF receiver performance in our 801 operators. The new receiver design has greater sensitivity and improved filtering for more consistent performance.
- 801's with serial numbers starting in Feb of 2022 include the new receiver.
- The HAE00061 (Control Board, LDCO800, Bbu Rdy) will be replaced with the HAE00077 (Control Board, LDCO800/801, Bbu Rdy, 2022).
- As a result of these improvements, we do not recommend our older "wide band" MegaCode transmitters to be used with the improved receivers. Our "wide band" MegaCode transmitters include the MCT-3 and MCT-11 (DNT00089 and DNT00090) and the MCT-1 and MCT-2 (DNT00083 and DNT00084).
- Also please note that starting in February of 2022 all of our PDS branded garage door operators PDS801, Ultra901, and Ultra901B (LDCO801-12, LDCO863-12, LDCO863B-12) will include Precision branded versions of the MTS3 transmitter, the MTS3-12.

LINEAR™

How to determine the Serial Number:

Test Serial Label:

Serial No
YYYYMMDDTSSSS

YYYY = Year

MM = Month

DD = Day

PCBA Serial Label:

YYMMDDxxxxxx

YY = Year (2007 in example above)

MM = Month (04 = April in example above)

DD = Day (10 in example above)

Please let your Regional Sales Manager or our Tech services group know if you have any questions.
