

Nortek Security & Control Launches GoControl Thermostat

The first in a new line of connected HVAC solutions, the GoControl Thermostat is easy to install and brings smart climate control to a broad range of security and smart home systems.

Las Vegas, NV – April 15-17 – ISC West 2015 – Sands Booth #20043 - Nortek Security & Control, a Nortek company (NASDAQ: NTK) and a leader in the residential and commercial security and control markets, launches the first product in a new family of GoControl™ branded communicating thermostats. Serving as a bridge between smart controllers and a home's heating and cooling system, the GoControl Thermostat provides intelligent, wireless remote control of all thermostatic functions. Nortek Security and Control's smart thermostat family will include Z-Wave and Wi-Fi connectivity options, enabling the company to address a range of retail, security, HVAC, custom installation and self-install opportunities.

"HVAC management represents one of the top trends in smart home control, so we're excited to bring this solution to security dealers," said Duane Paulson, senior vice president of product and market development, Nortek Security & Control. "The GoControl Thermostat is easy to install and compatible with new and existing home control systems, so it can be sold to a broad range of customers as a standalone solution or margin enhancing add-on to a security system."

Installation, programming and control of GoControl Thermostats is simple. The units can be hardwired into a home using existing thermostat wires, or, in cases where there is no power, the smart thermostats can be powered by four AA batteries for two years of life. The line features LCD screens, both b/w and color options, touch screen and non-touch screen versions, and easy on-screen setup of all thermostat functions. Across the entire family, GoControl Thermostats are compatible with over 90% of the existing control systems in the market today. The Standard model of the new GoControl thermostats will begin shipping in Spring 2015.

Nortek Security & Control's GoControl Thermostat product family is engineered to work in unison with other Z-Wave wireless controllers and products as part of an integrated smart home. Other connected products within the GoControl ecosystem include Z-Wave hardwired and plug in light and appliance controls, LED bulbs, security panels, garage door controllers, sensors and more.

Strongly positioned with collaborative product lines and the ability to cross-pollinate technology across the broader Nortek family, Nortek Security & Control provides a broad range of smart home solutions to OEMs, telecoms, major retailers, managed service providers, security dealers, custom installers and self-install consumers.
